

Scott Jewett

Deployment-Minded Technical Operator | Infrastructure Specialist | Field Engineer | AI Workflow Builder

Murfreesboro, TN | Nationwide Deployment Background

scott.jewett@techsgt.com | (262) 729-2488

scottjewett.me | techsgt.com | GitHub Reliability Harness

Professional Summary

Deployment-minded technical operator with 35+ years across military communications, nationwide field engineering, network infrastructure, low-voltage systems, data center support, and AI-assisted workflow design. Experienced working in unclear environments where documentation is incomplete, systems are mislabeled, customers are under pressure, and the job is not finished until infrastructure is operational again.

Core Positioning

- Field-tested infrastructure and deployment operator
- Military communications experience across tactical, satellite, ship, air, and ground systems
- AI workflow builder focused on operational clarity and escalation-aware systems
- Practical systems thinker for ambiguous environments and incomplete handoffs
- Customer-facing technical operator with nationwide deployment experience

AI Reliability & Operational Systems

Scott's AI work focuses on operational AI reliability, human-in-the-loop systems, escalation logic, unsafe certainty detection, and deployment-aware workflow support for ambiguous real-world environments.

Technical Projects

Agent Reliability Field Test Harness

Built a lightweight Python reliability test harness evaluating how AI assistants respond to ambiguous, high-stakes field deployment scenarios. Focus areas include escalation behavior, unsafe certainty detection, missing-information handling, and failure-mode awareness. Result: 8 scenarios tested, 8 passed, 0 failed.

GPT Swarm / AI Agent Lab

Built role-based GPT assistants for field operations, legal workflows, AI support systems, customer interaction, and deployment-aware operational workflows.

<https://scottjewett.me/gpt-swarm>

WebWalletX

Developed an AI-assisted operational dashboard concept for account visibility, workflow organization, and digital cash operations.

<https://webwalletx.com>

AI Pro Se GPT Case Vault

Designed a human-in-the-loop legal AI workspace concept for case organization, AI-ready exports, timelines, and document management.

Technical Deployment Experience

TechSGT.com — Owner / Operator (2020–Present)

Veteran-owned IT networking and low-voltage cabling company supporting infrastructure troubleshooting, field-service coordination, business IT support, contractor management, and customer-facing technical deployments.

IT Contractor — IT Field Engineer (2013–Present)

Nationwide field engineering across retail, hospitality, healthcare, financial services, government facilities, POS systems, LAN/WAN support, DAS, imaging, migrations, and network infrastructure.

IES Communications — Data Center Manager (2021–2022)

Managed and optimized data center operations at EdgeConneX Nashville, supporting infrastructure reliability, technical troubleshooting, compliance, and operational continuity.

Von Technologies — IT Field Engineer (2017–2021)

Road-warrior field engineer supporting Wi-Fi surveys, network implementations, Hilton Connected Room deployments, Valvoline BayTracker systems, and industrial plant projects.

Military Communications Experience

U.S. Navy — NR SEAL Team 3

Radioman / Information Systems Technician, Petty Officer 2nd Class (1997–2000)

Operated complex networked communications systems supporting air, ground, ship, submarine, satellite, and special intelligence communications.

U.S. Marine Corps — 4th ANGLICO

Field Radio Operator, Sergeant (1988–1996)

Operated PLRS, DCTs, tactical facsimile systems, RF communications, and cryptographic frequency-hopping equipment during Desert Shield/Storm. Awarded Navy Achievement Medal for heroic achievement and superior performance of duties.

Selected Capabilities

AI reliability evaluation | Human-in-the-loop systems | Escalation logic | Failure-mode analysis | Network infrastructure | Low-voltage systems | Wireless surveys | Fiber coordination | POS systems | Data center operations | Operational documentation | React / TypeScript / Vite | Python reliability harness development
